POSTOPERATIVE REHABILITATION GUIDELINES **ARTHROSCOPIC POSTERIOR BANKART REPAIR**

The following protocol is intended as a general guideline for physical therapist, athletic trainer, and patient after a posterior Bankart repair. These guidelines are designed to facilitate the expedited and safe return to athletic or professional activity and is based on a review of the current scientific principles of a posterior Bankart repair. For the treating health care provider this protocol should not serve as a substitute for individualized clinical decision making during the patient's post-operative course but should rather take into consideration the individual's physical findings, progression, and possible post-operative limitations. If the therapist or patient requires assistance or encounters any postoperative complication they should consult with **the surgeon**.

Physical Therapy to Start in first week after surgery.

Phase I - Immediate Post-Surgical Phase

Precautions:

1. No Lifting of Objects
2. No Excessive Shoulder Motion Behind Back
3. No Excessive Stretching or Sudden Movements
4. No Supporting of Body Weight by Hands

Week 0-4
